The implementation of an alarm system in Cooperative Intrusion Detection System

2000 July-August, Lab of Computer Supported Cooperative Work, Dept. of CS, Tsinghua Univ.

ABSTRACT:

The project was to implement a Cooperative Intrusion Detection System. In this project, my work was to design and implement the alarm system which sent out alert signal when there were attacks detected. Besides messages to the host and other cooperative hosts, it will use email and telephone to send alert signals. What’s more, I also investigated the response unit of IDS and made a summary.
